a research on the daily activities of mother and infant of Sumatran orangutan (*Pongo abelii*) in Bukit Lawang, Gunung Leuser National Park, Langkat District, under a supervision by an orangutan expert, Dr Sri Suci Utami Atmoko. Now I am working for Borneo Orangutan Society Foundation (BOSF) in Samboja, East Kalimantan as a releasable orangutan care staff. This is truly a fantastic job and I am very excited with my job as I can get involved directly in orangutan conservation and this is my original dream since I was student and the OCS has enabled me to achieve my dream.

3. Gian Anas

My Name is Gian Anas and I received the OCS in 2007 when I was studying at Forestry Department of Agriculture Faculty of North Sumatra University. I graduated in 2010 after completing a research on comparison of seed growth speed between duku (*Lansium domesticum*) seeds that are digested by orangutan and natural seed growth. I am now enrolling my post graduate study programme in Andalas University, West Sumatra and I hope that I can continue doing research on the role of orangutan in natural forests.

4. Tetty Fransiska Panggabean

I am Tetty Fransiska Panggabean and I graduated from Biology Department, Mathematics and Nature Science Faculty of State University of Medan (UNIMED). I was awarded the OCS in 2008 and since then I was encouraged to complete my study by conducting a final research project on the prevalence of nematoda paracite worms at Sumatran orangutans in Bukit Lawang, Gunung Leuser National Park. I hope that my research can contribute greatly to orangutan conservation in Indonesia. I am now teaching biology in a school and I am always happy to tell story about orangutan life to my students.
